Welcome to Electrical & Systems Engineering

Greetings! Our doctoral students are critical to our success as a department. We look forward to helping facilitate your progress through our program. You are welcome to contact us at any time if you have concerns or questions.

Sincerely,

Dr. Bruno Sinopoli, Department Chair
Dr. James Feher, Director of Master’s Studies
Dr. Joseph A. O’Sullivan, Director of Graduate Studies
Dr. Andrew Clark, Director of Graduate Admission
Madi Hester, Graduate Program Coordinator
Stacia Burd, Graduate Program Advisor

Graduate Student Services Welcomes You to Washington University

Graduate Student Services offers support to all Engineering graduate and professional students from admission through graduation. We connect students with resources at WashU to help them achieve their academic goals, address personal concerns, and ensure they get the most out of their experience. We also support faculty and staff with administrative processes and policies related to graduate admissions, financial aid and graduate programs. Please feel free to stop by Lopata, 203, or contact us at 314-935-5830 or eng-gradstudserv@wustl.edu if you need help, or have questions.

1. Registration

The Department of Electrical & Systems Engineering offers four doctoral degrees: Doctor of Philosophy (PhD) and Doctor of Science (DSc) in Electrical Engineering; and PhD and DSc in Systems Science and Mathematics. The Doctoral degrees are administered and granted by the McKelvey School of Engineering [A].

All Doctoral students are matriculated in the McKelvey School of Engineering. Registration takes place each semester on dates announced by the University. Detailed instructions for registration plus necessary materials are emailed directly to all graduate students enrolled during the previous semester.

All graduate students pursuing a degree in the department must register each semester until all degree requirements are completed. Historically, most PhD programs have been completed within five or six years. Students register in courses and/or research units until they have earned the total number of credits required for their degree. Doctoral students typically register for nine credits of courses and/or research each semester until 72 credits are completed; students may choose to spread out research. After earning the required number of credits and fulfilling the course degree requirements, the student requests registration from their advisor or the Graduate Program Coordinator for one of the following:

- **EGS 9000 Full-time Graduate Research/Study** - Full-time Graduate Research/Study indicates the student's full-time engagement in research or academic writing until graduation. Students register for EGS 9000 based on recommendations from their advisors that the students are making satisfactory progress toward their degrees.

- **EGS 9001 Full-time Graduate Study in Absentia** - During a student's period of regular enrollment, they may have a need or opportunity to study away from Washington University. The McKelvey School of Engineering on a case-by-case basis in absentia will consider recommendations from departments for students’ registration. Students must complete the In Absentia form. If approved by the McKelvey School of Engineering, these students will be registered for EGS 9001 Full-time Graduate Study in Absentia. Students may be allowed to register for EGS 9001 for up to four consecutive or non-consecutive fall/spring semesters. Semesters in which a student is registered in absentia are counted as part of the student's program length.

Full-time Doctoral students registered within the program and making satisfactory academic progress are eligible to receive a stipend, tuition remission, and the health insurance and wellness fee subsidies. Tuition each semester will be calculated based on the number of registered course units.

1.1 Categories of Registration

- **Active Status or Continuing Student Status**: A graduate student is viewed as having an active full-time status if enrolled in nine (9) or more units or a PhD student enrolled in either EGS 9000 or 9001. A DSc student enrolled in ENGR 884 (Doctoral Continuing Student Status) is considered to be enrolled with Continuing Student Status. A student is enrolled under active part-time status if enrolled in at least one, but fewer than nine (9) units. Graduate students must be authorized by their advisor prior to registration.

- **Inactive Status**: Students who have not completed their course requirements but who, because of personal reasons, must suspend their studies may request a leave of absence with the approval of their advisor, the Director of Graduate Studies and for Doctoral students the McKelvey School of Engineering. See the McKelvey School of Engineering website on leaves for further information. Doctor of Science students, who suspend their studies must register for ENGR 886 (Nonresident Doctoral Student Status).

Students who fail to register in one of the previously mentioned categories will automatically have their
Please note: Graduate students who do not register in one of the above categories will have to apply for reinstatement if they wish to re-enroll at a future time. For reinstatement information, masters and doctoral students should contact McKelvey Graduate Student Services [B]. Students seeking reinstatement may be required to pay a reinstatement fee, take special reinstatement examinations, and repeat previous work if it fails to meet contemporary standards. Candidates for the DSc degree who apply for reinstatement may be required to repeat qualifying examinations.

2. Advising

2.1 Temporary Academic Advisor
Advising of incoming doctoral students is handled by the Doctoral Admissions Committee, which assigns an advisor for the selection of courses for the first semester.

2.2 Research Advisor
Each doctoral student is required to successfully advance to candidacy as discussed later in this document. At the successful conclusion of that process, a student has a research advisor who typically will serve as their academic advisor as well.

2.3 Changing Advisors
The advising relationship is established and continued only by the mutual consent of student and faculty member. If the advising relationship breaks down, then the department will work with the student and the advisor on a resolution.

3. Course Information

The normal load for full-time graduate students is nine (9) units per semester. The course selection and load must be worked out with and approved by the student's advisor. Graduate students with research assistantship duties will typically enroll for course loads commensurate with the requirements of these duties. Students otherwise employed full- or part-time, on- or off-campus, will determine a satisfactory reduced course load with their advisors. International students on student visas are required to maintain full-time enrollment status.

Given that communication skills are important for all doctoral students, as well as required to complete the Mentored Teaching Experience, advisors may request that students complete courses aimed at improving written and oral communication in English; such courses do not count toward the 72 units required for a doctoral degree.

3.1 Academic Requirements
Students need 72 credits to obtain a doctorate from the ESE department. Credits come from three kinds of work: regular courses, seminars, and research credit. These 72 units must consist of at least 36 units of technical coursework approved by the academic advisor and at least 24 units of research, and may include work done to satisfy the requirements of a master's degree in the McKelvey School of Engineering in a related discipline. The additional 12 units may come from any of the three kinds of credits listed above.

Students cannot get course credit for both ESE 417 and CSE 417.

3.2 Transfer Credit
A maximum of 24 units of graduate credit earned at institutions other than Washington University may be applied toward the Doctor of Philosophy degree and a maximum of 30 units for the Doctor of Science degree. Transfer credit must be recommended by the advisor, forwarded for approval by the ESE Graduate Committee, who then forward it for approval by the McKelvey School of Engineering.
No graduate courses carrying grades lower than B can be accepted for transfer toward any graduate degree, and no courses will be accepted toward degree requirements if the course exceeds the 10-year maximum period unless they have formal approval of the McKelvey Doctoral Committee. To transfer PhD courses, please fill out the application for PhD Transfer Credit Form [1]. It should be noted, that courses transferred in for inclusion in a doctoral degree are not automatically approved. For inclusion in a master’s degree, please consult the master’s handbook for that procedure.

3.3 Seminars
Each year the department sponsors or participates in a series of seminars by visiting lecturers and WashU faculty and students. All full-time graduate students are required to enroll in ESE 590 - Graduate Seminar, which is a course carrying zero (0) units. Please refer to the syllabus provided on Canvas for the most up-to-date requirements to obtain a satisfactory grade, but typically they are as follows:
- Masters students must attend at least 3 seminars per semester, except for first year Master's students who must attend 4.
- DSc and PhD students must attend at least 5 seminars per semester, except for first year PhD students who must attend 6.
- Part-time students are exempt except during their year of residency. Any student under continuing status is also exempt.

4. Qualifying and Matching Process

The process for matching students with prospective research mentors and the academic qualifying process are synergistic, but follow separate paths. Passing the qualifying exam is not contingent on a successful matching, and vice versa. Students must successfully complete both processes to be qualified for formal advancement to candidacy and the research phase of the doctoral degree. Differences between the DSc and PhD requirements will be noted.

4.1 Goals of the Matching Process
Matching students with research mentors requires balancing several factors. There are factors that are specific for students, factors specific for faculty, and factors that impact both. Students need to have research projects of interest, working with faculty with whom they are compatible, and with sufficient funding to support the students for the duration of their programs. Faculty need to have a sufficient number of students working on their projects to achieve their goals, and they need to maintain and nurture productive working environments sufficient to achieve those goals.

The department seeks to ensure that each student has an opportunity to perform rotation activities (i.e., engage in research activities in a significant and meaningful way) with at least one faculty member with whom they share research interests. The goal is for all PhD students entering in a fall semester to be matched with such faculty by May 31 of the following year. For a DSc student or part-time PhD student, the timing of the match is relaxed and treated individually for each student depending on the projected timeline.

4.2 Goals of the Qualification Examination Process
The qualifying examination process is designed to assess students’ preparedness to pursue doctoral research with research mentors in the department. Specifically, the goals are:

- To evaluate the student in the following areas:
  - Communication skills, including English proficiency.
  - Ability to engage in academic discourse professionally.
Technical proficiency in pertinent ESE areas, at a level of depth appropriate for first-year doctoral student.

- To provide constructive feedback to the student on areas of proficiency and improvement. The feedback will include recommended remedies, such as supplementary coursework, immersive experiences for improving English proficiency, and improvement of oral presentation skills.

- To provide feedback to the potential faculty mentor on the above areas.

- To ensure a high and uniform quality of doctoral students in our department.

### 4.3 Timeline for Parallel Rotation and Qualifying Process

A timeline for PhD students to complete the process is provided below. DSc students should complete this process before they have finished 36 units of credit that will be applied toward their DSc degree.

(Rotation II and Qualifying Attempt II may not be necessary as described below.)

End-August Faculty Meeting to Approve Students for Continued Doctoral Studies

- There are two rotation periods: Fall and Spring. If the first rotation results in a match, then there is no second rotation. If the first two rotation periods do not result in a match, then the student may arrange a third rotation to be completed by July 15 of the academic year in which they begin the Ph.D. program.

- The rotation mentor and research advisor must be a tenured or tenure-track faculty member in the department, or a member of the ESE affiliate faculty.

- The rotation mentor for the fall semester will be determined by the beginning of the fall semester, based on the admissions and matriculation processes, in consultation with the ESE Admissions Committee or its equivalent and the Department Chair.

- During the rotation, the student works closely with the mentor on tasks and research projects assigned by the mentor.

- At the end of the rotation, students will need to complete a research rotation report at the conclusion of each
rotation. For further details please refer to sections 4.4 and 4.6.

- At the beginning of a rotation, a doctoral students will complete the Electrical & Systems Engineering Lab Rotation Form [2]. This form will be used to determine what research rotation students are currently doing, as well as making the department aware of the rotation. At the end of the semester or rotation, the student and their advisor will need to discuss whether there is a match and the student will be continuing their studies in the lab or not. If there is a match, then the student will fill out the Lab Affiliation Form [3]. If there is no match, the student will need to complete another rotation, with the associated forms.

- If unable to complete a match after the second rotation, the student will be on academic probation for 90 days. Student will be required to meet with committee chair and the Director of Graduate Studies. The student has a final opportunity to secure an advisor/funding doing a final, 90 day rotation. If unsuccessful candidate will be dismissed from the program at the end of the first year.

- When a student is a match after a rotation, the PI will begin financial support for the student at the beginning of the next semester.

4.4 Qualifying Process

- The first round of qualifying exams is scheduled for February; the second round, if necessary, is scheduled over the following summer. The ESE Department will appoint a faculty member or committee to assign qualifying exam committees and to organize the exams on behalf of the department.

- Each student is assigned a qualifying exam committee of three tenured or tenure-track faculty members in the department, including affiliate faculty members. The most recent rotation advisor will not be a member of the Qualifying Exam Committee.

- The students will be asked to complete a form that includes advisors in rotations and topics in which the student has expertise related to the rotation topic. On that form, students may suggest up to five ESE faculty for this qualifying exam committee by January 17 (for summer exams, the students will be notified of the deadline). The ESE Department appoints the committee; the student should not contact faculty members in advance. The ESE Department may select other faculty members to serve.

- The qualifying exam consists of a private oral presentation approximately twenty minutes in length to the Qualifying Exam Committee, followed by questions from the committee.

- The presentation may cover rotation activities, in which case their report will be a research rotation report, or it may be on a separate area in ESE. If a separate area in ESE is chosen, then at least two or three academic papers are selected as the basis for the report and presentation, which will be a critical review.

- Typically, the report is at least a four-page self-written paper. This report or paper will be submitted to the ESE Graduate Program Coordinator two weeks prior to the actual exam.

- Following examination, each member of the committee will assign a score based on a uniform rubric agreed to by the department, covering areas described in Section 4.2 above. In each of the three areas (communication skills, engagement in academic discourse, and technical proficiency), the committee will score the performance as:
  - Excellent
  - Very Good
The committee will discuss the outcome at the end of the exam. The outcome will be sent to the ESE faculty as a recommendation, with final outcome determined at a faculty meeting. Possible outcomes of the exam are:

- Pass, marginal pass, marginal fail, and fail.
- The committee will provide constructive feedback to the student on areas of proficiency and improvement.
- The student may consult with the departmental representative(s) regarding any concerns they have about the examination process.

If performance is deemed unsatisfactory, the student may have a second attempt at the qualifying exam. The procedure for the second attempt mirrors that of the first attempt, with the following additions:

- The second attempt must be completed at least a week before the August meeting of the faculty in the department.
- If the second attempt is unsuccessful, the student is deemed to have failed the qualifying exam.

4.5 Advancing into Candidacy

- If a student has a successful match and passes the qualifying exam, then the faculty of the department vote on advancing the student to candidacy at a regularly scheduled meeting. Research mentors of students considered for candidacy will be invited to the faculty meeting.

- Students who fail to match or fail the qualifying exam will be discussed by the faculty at a meeting no later than the August following the first year of study; the faculty will vote whether to advance each student to candidacy. Research mentors of students considered for candidacy will be invited to the faculty meeting.

4.6 Research Rotation Reports

Within three weeks of the end of each rotation, the student will write and submit a document to the rotation mentor for approval. The report should be written in the form of a standard research article and it must include the following: a) student’s name; b) title of report; c) semester/year of the rotation; d) rotation mentor’s name; e) date of report; and f) proper citation of prior work. This document should be double-spaced. Most written reports are anticipated to be at least 4 pages and up to 10 pages in length. The length may vary, but the quality should not. If the project has not been completed, preliminary or partial results are to be described. A typical report contains:

- Abstract
- Literature review
- Objectives of rotation
- Methods used
- Results of rotation, with appropriate figures, tables, or other data analysis
- Conclusions
- Recommended next steps

4.7 Expected Course Selection

- The PhD degree requires at least 36 units of courses, 24 units of research, and 72 units total.

- Most students will take two courses in the fall they enter graduate school, along with a three-unit rotation course (ESE 601 – Research Rotation for ESE Doctoral Students). This rotation course counts toward the course requirements for the degree.
• After a student has a successful match, then the courses in subsequent semesters are selected in consultation with the research advisor.

• A grade is awarded to a student after the rotation report is submitted and accepted by the research advisor.

• If a student does not have a successful match in the first rotation, then typically this student would take two courses and a second three-unit rotation course in the second semester. This second rotation course would not count toward the course requirement for the PhD degree. These courses would be selected in consultation with the academic advisor.

• Occasionally, a student decides to match with the first rotation advisor after completing the second rotation. In that case, the student and the matched advisor complete the Lab Affiliation Form.

5. Milestones

Each student’s graduate career is marked by a series of milestones achieved on the way to a doctorate. At each milestone, students demonstrate certain skills and abilities critical to success in ESE research. The ESE faculty defined these milestones both as intermediate targets at which to aim and tools to assess your progress toward the doctorate.

Times are given in years relative to the beginning of the first semester as a graduate student at Washington University. While the guidelines are flexible, the time limits should be taken seriously. The following sections describe the procedures of each milestone in more detail.

There are two sets of requirements in this section. The first is the mentored teaching experience which is a teaching requirement. The second is a set of requirements related to research progress, ultimately leading to a dissertation and final defense.

5.1 Mentored Teaching Experience

There are two parts of completing the required teaching in the department. The first is the requirement to complete the mentored teaching experience in a class as described below. The second is a requirement for four oral presentations outside of the laboratory, as detailed below.

After successfully completing the qualifying process, but before the dissertation defense, doctoral students must fulfill two mentored teaching experiences (MTEs) in ESE or otherwise approved courses. Students are required to have a mentored teaching experience for at least two semesters, documented by registering for EGS 600 Mentored Teaching Experience. Please contact the Graduate Program Coordinator if you need help identifying courses for the MTE.

Prior to the second year, doctoral students must take the ESE Communication Proficiency Exam. This exam is designed to assess students’ readiness to complete an MTE successfully. Students who need additional training are required to sign up for the course E60 Presentation Skills for Scientists and Engineers, in the fall of the second year.

Doctoral students must complete the MTE orientation, and attend two approved workshops conducted by the Teaching Center [C] by the end of their third year of doctoral studies. Documentation of attendance by the Teaching Center will be used to verify this requirement. Working closely with the instructor in a course, students may fulfill the MTE requirement in many ways including:
Giving lectures in undergraduate classes
Conducting recitation sessions in undergraduate classes
Giving lectures in laboratory courses that introduce or interpret the experiments
Conducting help sessions in which the graduate student explains the background and methodology of engineering approaches (involving a lesson plan)
Holding office hours
Grading assignments or exams

Doctoral students are also required to deliver a minimum of four oral presentations at journal clubs, seminar series, scientific conferences, retreats, or a departmental seminar. Presentations given as part of the MTE, lab meetings, or dissertation committee meetings will not satisfy this requirement. The student should document the fulfillment of this requirement and submit it to the dissertation research mentor for approval. The approved document should then be submitted to the Graduate Program Coordinator. Once all parts of the MTE are completed, students must complete the PhD Mentored Teaching-Professional Experience Milestone form [4].

5.2 Ethical Conduct of Research

All doctoral students must complete training in the ethical conduct of research. Most students will complete PERCSS, the Program for the Ethical and Responsible Conduct of Science and Scholarship. This training is offered at least once per year. Details on the requirement will be communicated to each student. Any student seeking to fulfill this requirement in a different way must obtain approval in advance from the co-directors of the program.

In addition, all students in the program are strongly encouraged to engage in workshops, seminars, and training opportunities related to diversity, equity, and inclusion. Washington University offers many such opportunities, including those offered through the offices of Diversity, Equity and Inclusion in the McKelvey School of Engineering, https://engineering.wustl.edu/about/diversity/index.html[D] and in the School of Medicine https://diversity.med.wustl.edu/ [E]

5.3 Qualifying Exam, Matching Process, and Preliminary Research Review

The qualifying and matching process is described in detail in Section 4; these milestones are completed in year one.

There is a preliminary research review after year two, which should be completed by June 30 for students entering in a fall semester. The research advisor selects three ESE faculty members to participate as a committee. The student presents research progress to date; the anticipated length of this presentation is around 20 minutes. Note that this is not a proposal, but a progress report. After the presentation, the student answers questions and engages in academic discourse.

After the preliminary research review, the committee provides feedback to the student, the advisor, and the ESE graduate committee on:
  o oral and written (as reflected in presentation slides) communication skills;
  o ability to engage in academic discourse (understand and answer questions);
  o research progress and ability to engage within the research project structure;

5.4 Research Advisory Committee Approval

Each Doctoral student has a Research Advisory Committee approved by the Director of Graduate Studies that is chaired by the dissertation research mentor; this committee is typically proposed jointly by the student and the mentor, and the approval is documented by the completion of the Research Advisory Committee approval form [5] prior to the proposal.

The dissertation subject must be approved by the Research Advisory Committee. This approval is obtained by successfully passing the dissertation proposal. The Research Advisory Committee and Dissertation Defense
Committee (5.9) must follow all guidelines of the McKelvey School of Engineering and consists of five members (the dissertation research mentor plus four other members) with the following requirements:

5.2.1 Three (3) ESE primary faculty - or affiliated faculty (at least one must be a primary ESE faculty member).
5.2.2 One (1) faculty member (or scholar in private sector or government) without primary or affiliate appointment in the ESE department.
5.2.3 Four (4) of the five (5) members must be tenured or tenured-track faculty at Washington University.

Dissertation Proposal

The dissertation proposal should be completed by the end of the third year. The proposal and presentation will include a thorough survey of the field, a discussion of those areas in need of further research and a tentative but clear definition of the problem on which the student intends to focus the dissertation.

The student must present a written proposal to the committee at least two weeks in advance of the exam. The proposal should outline work accomplished to date, research planned for the dissertation, along with anticipated publications, and should give an approximate timeline. There is no specific format required for the written proposal in general, although an individual research advisor may require a student to use a specific format such as being consistent with an NSF or NIH proposal. Other research advisors may accept published or submitted papers as describing research accomplished to date, with additional material describing future plans, anticipated publication, and a timeline. The advisor must approve the written proposal prior to sending it to the committee.

It is important that the student and the committee recognize that the dissertation proposal is exactly that, namely a proposal. While it includes research and work accomplished to date, the intention is to provide an opportunity to discuss future work and get feedback from the committee. Committee engagement with the student from the proposal through the defense is intended to be positive and constructive, paving a pathway for success.

The format of the exam is as follows: The student should present the proposed research for approximately 30 minutes. Following the presentation, the committee examines the student on understanding of the foundation of the particular field of research and evaluates the scope and merit of the proposed research. With the student in a waiting room, the Research Advisory Committee votes on the outcome of the exam, following which the committee meets with the student and the advisor. After the successful proposal, the student completes the Proposal / Title, Scope & Procedure Form.

5.5 Timely Proposal Completion

A PhD student who has not completed their dissertation proposal by the end of their seventh semester in the PhD program is eligible to be placed on probation for one semester. The condition for coming off probation is that the student completes the proposal by the end of that following semester.

This policy will be implemented as follows. Near the beginning of the seventh semester, any student who has not completed their proposal will be notified that they are eligible for probation at the end of that semester if they have not completed the proposal. Students and their advisors may request an extension due to extenuating circumstances before the end of the semester.

The Doctoral Progress Assessment Committee considers the case of any student eligible for probation or suspension. The committee will vote on whether to place any student on probation in accordance with this policy, giving proper consideration for any extenuating circumstances.

If the student has not proposed by the end of the eighth semester, then the student and the student’s mentor can appeal to the Doctoral Progress Assessment Committee for an additional probation. If the student does not propose by the end of the ninth semester, then the student will be dismissed from the PhD program. Note that
the counting of semesters must account for any leaves of absence by the student.

5.7 **Title, Scope, and Procedure**

As previously mentioned, once Doctoral students pass their proposal defense, students should submit their [Proposal / Title, Scope & Procedure Form](#) to the McKelvey School of Engineering as soon as possible. This form briefly describes the planned work of the dissertation. The “Scope” portion of the dissertation indicates the specific area of study and the questions to be answered, while the “Procedure” briefly describes how the student carries out their work. The Title, Scope and Procedure Form must be registered with the McKelvey School of Engineering at least six months before the dissertation examination, or by the end of the fourth year, whichever comes first.

5.8 **Annual Review of Student Progress**

The student meets with the RAC / Dissertation Committee annually after the research proposal until the final defense; at least 4 members of the committee should attend. The student presents for approximately 15 minutes, highlighting progress and publications from the past year. The committee asks questions for approximately 30 minutes, focusing on progress, research direction, and potential areas of concern. Following the review, the Dissertation Committee provides feedback to the advisor and the student, with a copy to the Graduate Program Coordinator, who then provides copies to the ESE Graduate Committee. If there are concerns about the progress, then the report should discuss these concerns in detail. This report becomes part of the student’s record within the department.

5.9 **Final Defense**

Upon completion of the dissertation, the doctoral candidate must work with the Graduate Program Coordinator and Graduate Program Advisor to schedule the defense at least one month in advance. Students need to contact the Graduate Program Advisor to complete the Dissertation Defense Committee Approval Form, prior to the defense. The candidate presents the dissertation in a public forum and successfully defends the dissertation before a Committee consisting of the approved Dissertation Committee plus additional faculty as required. The dissertation must be approved by the completion of the [PhD Dissertation Defense Approval Form](#) after their defense.

5.10 **Submission and Printing of Dissertations**

Candidates must submit their dissertations electronically to ProQuest ETD Administrator. Students are given the option of ordering bound copies of their dissertations through Thesis-On-Demand. Electrical & Systems Engineering will cover the cost for the student, advisor, and department. Students should reach out to the Graduate Program Coordinator for assistance. For dissertation format and submission guidelines, visit the [McKelvey Thesis & Dissertation Submission Procedures website](#).

6. **Policies**

6.1 **McKelvey School of Engineering Policy on Probation and Dismissal**

The McKelvey School of Engineering Policy on Probation and Dismissal for Academic Reasons was approved April 24, 2014 by the Graduate Council and is embodied in the following Electrical & Systems Engineering Department plan. All students in departmental doctoral programs are expected to satisfy the academic performance requirements of the McKelvey School of Engineering, as described in The McKelvey School of Engineering Bulletin’s General Requirements section. All doctoral students in Electrical & Systems Engineering must maintain a GPA of 3.0 or higher, and register for ESE590 for all semesters of full-time status.

6.2 **Dissertation Committee**

If a student's progress is deemed unsatisfactory by the Dissertation Committee, the Committee may meet
more frequently with the student and require continuing progress reports, to be shared with the Director of Graduate Studies. The Committee will work with the student to develop and implement an improvement plan, which for example, may include recommended coursework and/or additional training in research techniques or strategies, as well as a timeline for improvements and consequences (including possible termination from the PhD program). In unusual cases where the Committee repeatedly judges the progress unsatisfactory, the Committee in consultation with the Director of Graduate Studies may recommend probation or dismissal.

6.3 Department Procedures for Probation and Dismissal

To manage decisions regarding probation and dismissal, academic performance of all doctoral students is reviewed by the Doctoral Progress Assessment Committee (DPAC), which the department has designated to manage decisions regarding placement on probation, removal from probation, recommendations for dismissal after a probationary period, and recommendations for immediate dismissal due to extreme underperformance.

The DPAC is chaired by the Director of Graduate Studies. All decisions are made in accordance with the McElvey School of Engineering’s Policy on Probation and Dismissal for Academic Reasons. Normally, a probationary period would be no less than three months and, where probation criteria involve coursework, the probationary period will normally consist of one semester.

The student will be notified in writing of the decision, including an explanation of academic performance issues leading to probation or immediate dismissal and, if applicable, any requirements for what must be done within a specified period of time during the probationary period in order for the student to return to good standing. The written probation letter should generally be accompanied by the opportunity for the student to meet with the Director of Graduate Studies or designated departmental faculty representatives for clarifying discussion(s), and copied to the vice dean for graduate research and education in the McElvey School.

All students on probationary status will be reviewed by the DPAC at the conclusion of the probationary period to determine whether the student should be (a) removed from probation and returned to good standing; (b) continued on probation; or (c) dismissed from the program. The student will be notified of the DPAC decision in writing.

If a student is dismissed from the program, the student will be notified in writing and will have the opportunity to appeal such dismissal in accordance with the McElvey School of Engineering on Probation and Dismissal for Doctoral students.

6.4 Research Assistantships

Research assistantships generally provide a stipend and some tuition from government or industry grants and contracts. They are awarded to students who have advanced to candidacy and made a commitment to a particular research area and who, by virtue of their academic background and record, satisfy a particular project’s needs.

Research assistantships may be supplemented by tuition scholarships that may be funded jointly by the McElvey School of Engineering and the School of Medicine. Research assistants are responsible to the project director (principal investigator) of the project. (Generally, this same individual eventually assumes the additional role of dissertation or dissertation mentor.)

6.5 Doctoral Students Adding a Master’s Degree

A doctoral student will almost certainly meet the requirements for a Master's degree in ESE as they progress through the milestones for their doctoral program. ESE would like to encourage all doctoral students to also obtain Master's degree once they have met those requirements. However, students wishing to add a Master's program must first have the Master's program added to their plan of study by the ESE department. The student
will send a request to add the program to the Director of ESE Master's Studies. The research advisor for the student will then be informed of the request to open this program so that they may discuss this with the student if that has not already happened. After the student and research advisor have had a chance to determine how this fits into the overall academic plan for the students, the Director of Master's Studies will have the registrar add the program to the student’s plan of study. Students must still file an intent to graduate on WebSTAC for that program once they have met the requirements. Doctoral students should note that transferring courses into a master’s program is done on a course-by-course basis, and should consult the master’s handbook for that procedure.

6.6 Outside Employment
Holders of fellowships, traineeships and assistantships are required to devote their 100% effort to graduate studies. They are not permitted to engage in any outside employment without special permission of the Director of Graduate Studies and the ESE Department Chair.

6.7 External Professional Activity for Full-Time Doctoral Students in McKelvey Engineering School of Engineering
Students and faculty must follow the guidelines developed by the university’s Conflict of Interest Review Committee (CIRC) [H].

6.8 Time Off
Graduate students receiving awards are expected to commit themselves fully to their studies and research regardless of whether classes are in session. Intersession periods listed in the University Academic Calendar note times when classes are not in session. Graduate students in residence should, however, utilize these periods to further their studies and research. Intersession periods are not time off for graduate students receiving a stipend and students are expected to work full time on research during these periods.

Students on full stipend are permitted to take a maximum of two weeks of vacation during the calendar year and are expected to communicate the timing of that vacation with their research advisor. In addition, students are permitted to take the university scheduled holidays. Additional time off can be arranged but must be approved ahead of time by the research mentor (once selected) or the Director of Graduate Studies (before the selection of a research mentor). Absences of research assistants must be scheduled so as not to impede the progress of an ongoing research project and should be cleared with the research mentor.

6.9 Administrative Support
Department staff will help students with payroll, their purchases, keys and allocation of space issues. They do not generally provide clerical services to graduate students except in connection with scheduled courses and sponsored research projects.

6.10 Copying Service
Graduate students may not charge copying coursework to the department or a research project without prior authorization. Requests for copying service are normally channeled through the department staff, who are instructed to verify authorization with the department chair.

7. Additional Resources

7.1 Child Daycare Subsidy
If you have any children, you may qualify for a subsidy for daycare offered by Washington University in St. Louis. The Office of the Provost describes:
“the purpose of the Child Daycare Subsidy is to help PhD student families meet the costs of child
daycare while they pursue their studies. The amount of child daycare subsidy awarded to eligible
applicants depends on their financial need, the number of children they have enrolled in child daycare
facilities, their child daycare expenses, and available funding.”
You can find eligibility requirements and more information here.

7.2 Resilience and Mental Health Resources
- Habif Health has a wealth of resources including: Student Health, Student Counseling, Let’s Talk
  Program
- NIH occasionally offers a Resilience Scientist series. Recordings of previous sessions are available
  online.
8. Faculty and Staff

Dr. Bruno Sinopoli  
Department Chair  
hsinopoli@wustl.edu

Dr. Joseph A. O’Sullivan  
Director of Graduate Studies  
jao@wustl.edu

Dr. Jim Feher  
Teaching Professor  
Director of Master’s Studies  
jdfeher@wustl.edu

Andrew Clark  
Director of Graduate Admissions
